EDUCATION

University of Pittsburgh

Pittsburgh, PA

B.S. Computer Science & Frederick Honors College Aug 2022 – May 2026 (Expected)

- GPA: 3.55 | Relevant Courses: Web Development, Systems Software, Data Structures & Algorithms, Operating Systems, Software Engineering, Software Quality Assurance, Interface Design Methodology

PROFESSIONAL EXPERIENCE

Broadcom

Pittsburgh, PA

Software Engineer Intern May 2025 – Aug 2025

- Automated the synchronization between Endeavor sandboxes and GitHub branches by developing a notification system, enabling developers to edit mainframe code directly in VS Code and commit to the Netmaster repository.
- Built an end-to-end Jenkins testing pipeline for Network Insights on a deployed WatchTower instance to validate product quality ahead of customer release.
- Enhanced security by integrating HashiCorp Vault across all Netmaster Jenkins pipelines, centralizing credential management.

Chipotle Mexican Grill

Pittsburgh, PA

Kitchen Manager Dec 2019 – Present

- Manage daily kitchen operations for a high-volume restaurant, ensuring compliance with food safety standards and maintaining high-quality output.
- Troubleshoot and resolve technical issues with point-of-sale systems, label printers, and iPads to minimize operational downtime.
- Lead interview processes to recruit, select, and train qualified team members.

PERSONAL PROJECTS

Find My Pickle

- Full-stack Flutter mobile app with Firebase (Auth, Firestore, Storage) and a CI/CD pipeline via GitHub Actions.
- Integrated Google Maps Places, Geocoding, and Directions APIs for court discovery, city/state search, and navigation.
- Real-time game session management (create/join pickleball games) with social features: court sharing, favorites, GPS tracking, and proximity search.

Card King

- Full-stack React Native app with Firebase Auth; integrated Google Vision API for card scanning and Ximilar API for AI-driven PSA-standard grading.
- Built a web scraper to pull recent eBay sales and calculate average card prices, displayed on a real-time dashboard with collection value tracking.

Fuse Filesystem

- Created a Linux FUSE userspace filesystem supporting 12+ VFS operations on a custom 5MB virtual disk with bitmap-based free space management (10,240 blocks).
- Designed indexed allocation with on-demand block expansion, scattered I/O, and robust error handling with errno propagation.

Unix Shell

- Built a Unix shell in C supporting builtin commands (cd, exit), arbitrary-argument program execution via fork/execvp, and proper SIGINT handling so Ctrl+C interrupts child processes without terminating the shell.
- Implemented stdin/stdout redirection (< and >) with error detection for duplicate redirections and file open failures using freopen and waitpid signal diagnostics.

Autocomplete Engine

- Implemented a De La Briandais (DLB) trie in Java to power a mobile-style autocomplete engine, generating ranked 5-word predictions from a 100k+ word dictionary trie with sub-millisecond lookup times.
- Built a persistent user-history symbol table that surfaces personalized, frequency-ranked predictions ahead of dictionary results, with history serialized to disk across sessions.

Bean Counter Simulator

- Built a Java GUI simulation of Galton's bean machine (luck and skill modes) using TDD with JUnit, Mockito, and JavaPathFinder (JPF) model checking to exhaustively verify correctness across all machine configurations and random outcomes.
- Applied static analysis via CheckStyle and SpotBugs; used property-based testing with the JPF Verify API to validate statistical invariants across all slot/bean count and luck/skill combinations.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, C, Python, HTML, CSS, Groovy, Dart

Frameworks/Libraries: React, Flutter, Node.js, Flask, JUnit, Selenium

Tools & Platforms: Jenkins, GitHub Actions, Docker, Firebase, HashiCorp Vault, Git, Endeavor, Zowe CLI, Rally

Expertise: Full Stack, Front-End, DevOps, CI/CD, Agile, Automated Testing, REST APIs, AI-Assisted Development
